DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 7-24-03 has been considered.

Specification

2. The disclosure is objected to because of the following informalities:

On page 11, line 13, the reference numeral "16" should read --116--.

On page 20, line 19, "the non-accessed" should read --The non-accessed--.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 21 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claim 21 recites the limitation "said second transistor" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim. The problem can be cured by making claim 20 depending upon claim 19, instead of claim 14.

Allowable Subject Matter

6. Claims 1-20 and 22-24 are allowed.
7. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach a method and apparatus of amplifying a signal by a transistor of an array of transistors including a storage cell transistor array of

a dynamic random access memory (DRAM). In particular, an apparatus for amplifying a signal comprises: a first transistor of an array of transistors including transistors of a storage cell transistor array, all of said transistors of said array of transistors being located in a first well of a single crystal semiconductor substrate. A first source-drain region of the first transistor is coupled to a fixed potential. A second source-drain region is coupled to a conductive line. And a gate coupled to receive an input signal to be amplified. The first transistor is operable to amplify the input signal to provide an output signal onto the conductive line.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references in the form PTO-892 disclose a single transistor used to amplify input signals to its gate in semiconductor memory devices.
